

Simplify the EDI process with Emporium

Collaborate. Integrate. Optimize.

About Emporium

Emporium is a cloud-based solution designed to simplify the Electronic Data Interchange (EDI) process to better meet the requirements of your business partners while minimizing the risks associated with the inherent complexity of EDI.

What is EDI?

Electronic Data Interchange (EDI) is the process of exchanging documents (purchase orders, invoices, advance shipment notices etc.) electronically, business-to-business (B2B). EDI facilitates data interchange between business partners in a timely and accurate fashion, resulting in increased organizational efficiency and collaboration.

Why Choose Emporium

It is the core element of all EDI transformations and communications. All your data will be easily accessible via the reliable and secure cloud-based system.

Integrates seamlessly with most major ERP systems and business management systems, allowing you to optimize the value of your investment by leveraging the technology you already use.

Enables you to transform and process data in any format, such as data from Web forms, EDI (ANSI x.12 or EDIFACT), XML and proprietary flat files by using different communication protocols, such as AS2, FTP(S), ASI, web services or VAN to improve collaboration with your business partners.

Allows you to easily manage exceptions either by sending the information back to your management system or by generating alerts via email or through a management console.

Makes the electronic data interchange process easy and efficient, saving you time and money.

EDI experts at Connectivia will guide you through the process. Connectivia will take care of:

- Electronic data treatment analysis
- Data transformation and mapping
- Coordination and project management with your business partners
- Data transmission
- Error and exception management
- Tests with your business partners
- The EDI go live phase
- The EDI post-production monitoring phase
- The migration from your current EDI solution
